

Easy, quick and safe!
Screwless MCB S 200 S

Reach your target faster with the screwless S 200 S

Thanks to the tool-free Easy-Connect Technology, our screwless S 200 S miniature circuit breaker can be wired up far more quickly and easily.

Plug in rigid and flexible cables with end sleeves simply and they will fit firmly and securely. Should the wiring be disconnected, pressure need only be applied to the specially developed release lever. So it's just as safe but much faster and no tools are needed!

- 1** Best visibility conditions for wiring through diagonally arranged clamps
- 2** Terminal clamps for all cables from 1 to 4 mm²
- 3** Specially developed release lever for easy manual control
- 4** Easily accessible opening for voltage test
- 5** Increased wire size for supply side terminal up to 35 mm²

One, two three, four... Good reasons for the S 200 S

1. Enhanced interconnection technology

Rigid and flexible cables with end sleeves can be directly plugged in. For flexible cables, connection takes place by pressing the easy to use release lever. This also applies for disconnecting the wiring. No tools are required!

2. Best visibility conditions for wiring

The cables are diagonally plugged in from the front and therefore always offer an unobstructed view of the clamps.

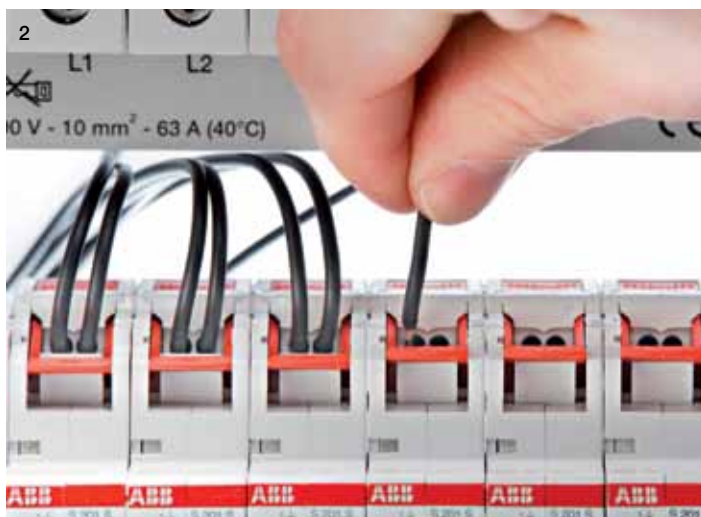

3. All cables fit

It does not matter which cables you use for wiring as they all fit.

- Rigid cables from 1 to 4 mm²
- Flexible cables from 1 to 4 mm²
- Flexible cables with end sleeves from 1 to 2.5 mm²

4. Fully compatible with all components of the ABB System pro M compact®

Established and approved accessories such as auxiliary switches and signalling contacts can naturally be connected. A combination with other System pro M compact® devices such as miniature circuit breakers and residual current devices is also possible at any time.
